APPENDIX B GLOSSARY

API -	Application Programmatic Interface. The interface used by an application to request services from a product.
AIX -	UNIX variant developed by IBM Corporation. It is the UNIX utilized in the preferred embodiment of this invention.
DBSP -	DataBase Server Processor - UNIX based database system sold by Assignee that operates as a database backend for mainframe systems.
DBSS -	DataBase Server System - A general purpose UNIX system that is the UNIX component of DBSP
ETL -	Extract, Transform, and Load
Fast-ETL -	Software that performs ETL and is the subject of this patent disclosure.
GCOS 8 -	- Mainframe operating system and hardware sold by assignee of this invention. This is the preferred embodiment of the mainframe system disclosed herein.
GFIP -	GCOS File Interface Procedure. The run-time routines developed for Fast-ETL that are bound with the GCOS 8 user application.
SID -	- Server Interface Domain
Teradata -	- Backend database system commercially made by NCR corporation and sold by assignee of this invention.
UFAP -	GCOS File Read/Write Application. A UNIX application written and provided by assignee as part of the Fast-ETL product. This program provides two services. One service is to write a data stream from UFIP to a UNIX file. The other service is to read a UNIX file and send its content as a data stream to UFIP.
RDBC - Re	elational DataBase Computer - Name given to NCR Teradata implementation attached to Assignee's GCOS mainframe through an I/O channel.
UFIP -	GCOS File Interface Procedure. The run-time routines developed for Fast-ETL that are bound with a UNIX user application or with the program provided by assignee, UFAP.

- UNIX Sockets Listener
